

Web designing & Development with PHP & PHP++

"Best course to learn Web Designing & Development with PHP"

Web Designing and custom graphic work is one of the best offering made by UVSsofts Technologies, our Web Design team prepares unique, original and templates.

PHP is a **server-side scripting language** designed for web development but also used as a general-purpose programming language. PHP is now installed on more than 244 million websites and 2.1 million web servers.

PHP code is interpreted by a web server with a PHP processor module, which generates the resulting web page: PHP commands can be embedded directly into an HTML source document rather than calling an external file to process data. It has also evolved to include a command-line interface capability and can be used in standalone graphical applications.
